Information Brochure

Company Information

Mobile Installation Technologies, LLC (MIT) is the nation's leading provider of installation services for mobile fleet electronics.

MIT was founded in 1998. Our headquarters are located 15 miles north of Atlanta in Marietta, Georgia. Since 1998, we have provided professional installation services for many of the world's largest transport fleets. Telecommunications companies, utilities, government organizations, municipalities, transport carriers, and automotive manufacturers have all realized the advantages and value that MIT can provide by streamlining project management and deployment logistics.

In 2004 and 2005 MIT has supplied installation services to SBC, BellSouth, Orkin Pest Control, Laidlaw, Itronix Corp, Sirius, XM Satellite Radio.

As of this printing (April 2005) in 2005 alone MIT has performed over 17,000 installations.

Our workforce is comprised of highly trained and experienced technicians and management staff. MIT offers the most versatile and efficient professional installation services in the industry. When utilizing MIT's services, you can expect MIT Technicians to arrive on time, in uniform and with the proper tools and equipment needed to do the job right the first time.

"We do one thing and we do it well.
We Install."

Greg Schnute
EVP, Business Development
MIT

MIT Fast Facts

"Did you know that MIT Technicians have installed more than **205,000** plus Riv-Nuts!"

"In 2000 alone MIT Technicians logged more than **1,075,862 miles** to service customers. That equates to driving around the earth 42 times!

MIT was selected as the Prime GPS Installation Service Provider for the World Trade Center Recovery Effort

"No installation has to be done so fast that vehicle integrity and installation quality are sacrificed."

MIT

Ask us how we provided service and support for **22,000** fleet vehicles?

Nothing is too big for MIT to install!

MIT Customer Comments

"We have learned more from MIT about our logistics in the last 15 hours than we have the last 6 weeks"

Rebecca Clough

Program Director, NY DDC
(Department of Design & Construction)
World Trade Center Recovery Effort

"Within the first two hours MIT came up with a simple solution to our trailer connect issue, and in the process saved us \$45,000 in cabling and connector costs."

Yorum Shalmon

Director of Product Management,
PowerLOC, Technologies

"This has never been done before. Install 8,300 plus MDT's (Mobile Data Terminals) into a mobile Telco service fleet in two months. Impossible you say? Not hardly, considering it's the same company that was told it was impossible to install 32,000 plus units for SBC in 9 months. And they pulled that off like a champ."

PacBell Telephone (Now SBC)
